

## Individual Addendum: Yuri Rodriguez

Team: ILOVECODING | Role: Macro Integration & Robustness Lead | Date: May 1, 2026

### Personal Contribution

---

Macroeconomic data integration, time-series validation, and robustness testing. Integrated FRED data; conducted sector/time-period subsampling; performed sensitivity analysis; quantified investor-ready recommendations. \*\*16 hours.\*\*

### Defended Decision: June 2015 Treatment Date for DiD (vs. Dec 2015)

---

**Evidence:** June 2015 marked Fed forward guidance shift; market expectations shifted immediately. December 2015 was mechanical hike, less unexpected. DiD coefficient +20bp ( $p=0.247$ , non-sig); parallel trends validated ( $r=0.92$  pre-June).

### Key Limitation

---

Measurement Error in Leverage: Accounting leverage excludes off-balance-sheet financing and derivatives. True economic leverage may be 10–30% higher; measurement error could attenuate coefficients toward zero.
